Jared D. Ashman

Active Secret Clearance | Sponsored by the Department of the Navy

Los Angeles, CA • jaredashman0209@gmail.com • 619-609-3395 • linkedin.com/in/jareddashman

Education

University of California, Los Angeles (UCLA) — Los Angeles, CA

Bachelor of Science in Computer Engineering — Expected June 2029

GPA: 3.9 | Dean's List

University City High School — San Diego, CA

Salutatorian, Class of 2025

Technical Skills

Programming: C++, Python

Embedded Systems & Hardware: ESP32, Arduino, microcontrollers, circuitry, digital logic design, soldering, hardware/software integration

Analysis & Tools: Fast Fourier transform (FFT), hardware-failure data analysis, Arduino IDE, Microsoft Office Suite

Experience

Student Teacher — UCLA Henry Samueli School of Engineering and Applied Science

September 2026 – Present | Los Angeles, CA

- Lead hands-on undergraduate instruction in underwater robotics and biomimetic engineering.
- Teach fluid dynamics, Arduino programming, soldering, circuitry, logic design, and hardware integration.
- Mentor student teams through underwater robot development, from foundational concepts to assembly, testing, and demonstration.

Student Trainee (SSEP) — U.S. Navy

June 2026 – September 2026 | San Diego, CA

- Analyzed complex hardware-failure data for Department of the Navy C5 systems to identify trends and support lifecycle sustainment.
- Used failure data to investigate sustainment issues and support improvements to logistics processes.

IT Specialist — UCLA Undergraduate Admissions

September 2025 – June 2026 | Los Angeles, CA

- Supported a network of more than 100 workstations through hardware maintenance, software deployments, updates, and troubleshooting.
- Updated Undergraduate Admissions website content and helped resolve day-to-day technical issues.

Projects

PiLight — ESP32 | Python | FFT

- Develop an ESP32-based reactive LED system with signal-processing code written in Python.
- Use fast Fourier transform (FFT) analysis to extract frequency information and control LED behavior.

PID Line-Following Car — ESP32 | Arduino IDE | In progress

- Design an ESP32-based line-following car using eight brightness sensors to detect the line.
- Develop firmware in the Arduino IDE to implement PID control using sensor feedback.

Activities

Computer Vision Simulation Manager — Bruin Underwater Racing (BUR) Software Team

UCLA Club Pickleball
